

Agrippa sound activated door closer

NEW DUAL MODE

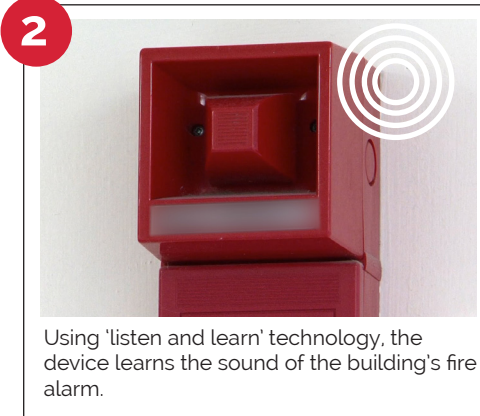

The Agrippa fire door closer is fitted in place of a traditional door closer to hold the fire door open in any position, whilst ensuring the door will close in the event of a fire. Agrippa is a 'free-swing' device which makes heavy fire doors light and easy to move.

New dual mode - Install the closer straight from the box or programme the device to listen and learn the sound of your fire alarm once installed.

How does it work?

The Agrippa door closer is battery powered and wire-free. The device is installed at the top of the door.

Using 'listen and learn' technology, the device learns the sound of the building's fire alarm.

The Agrippa door closer recognises the fire alarm and automatically releases the door, protecting the building.

Features

- Battery powered and wire-free
- Dual mode: Ready to protect. Ready to learn
- Fail safe, closing the door upon battery failure
- LED display and low battery warning
- Daily timed release option to close the fire door at night
- Red button on unit to manually close the fire door
- Listens and learns the sound of your specific fire alarm providing greater reliability

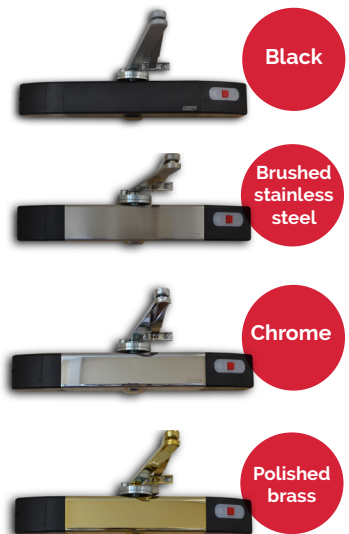

Benefits

- Recognised by UK Fire and Rescue Services and the London Fire Brigade
